

# Touch Screen Kiosk

The continued success of the touch screen kiosks and the new, easy access shell design has led to a number of TOC's installing kiosks in driver mess rooms across the U.K and Ireland. Central Trains, WAGN, Iarnród Éireann, Southern Railways, Chiltern Railways are operators who have taken advantage of the kiosk environment which gives peace of mind that the system is secure and provides users with the ability to access route learning material without the need to gain access to a locked or supervised area.

In addition to offering route learning material, the touch screen technology allows potential access to a range of training videos, PowerPoint presentations and safety material, either by local or intranet connection.

The Route Learning Touch Screen System offers:

- A durable and secure environment for the equipment running the Route learning system
- A usage logging function to assess the effectiveness of the kiosk location
- Network connection capabilities to allow Internet and company Intranet access
- A comprehensive route library facility
- Individual user and route license keys, giving access only to authorised users
- Flexible review of Individual Moves, Signals and Signal Approaches on route
- Flexible video playback speed
- A comprehensive route learning experience linking video images of routes directly to on-screen moving maps
- Requires minimal training to use the route learning system
- Access to training in non-training environment .e.g. drivers' mess rooms
